

Thank you for ordering from Mamas & Papas.

For over 30 years, we have been committed to creating a world of quality, individuality and style for parents around the world. At the very beginning we were inspired by our daughters — now we see them all grown up, with children of their own, helping us to share our passion for parenting to their generation of Mums and Dads. We hope you enjoy exploring our new collection and wish you a very warm welcome to our world.

We are committed to designing and developing products to the highest standards, for your family to enjoy and we welcome any feedback or comments you may have.

The Mamas & Papas Family.

IMPORTANT: PLEASE READ THESE INSTRUCTIONS CAREFULLY AND KEEP THEM FOR FUTURE REFERENCE.

INSTRUCTIONS FOR SAFE USE

WARNING:

To prevent drowning: Always keep your baby in arms reach when in the water. Put the baby in the bath seat. Never leave your baby unattended in the bath seat. Even for a moment (for example to answer the telephone or door). A child can drown very quickly even in shallow water.

- Baby bath seats are not safety devices. Always supervise children in a bath. Children can drown in only centimetres of water and it only takes a few seconds for it to happen.
- Never leave a young child in the bath in the care of an older sibling. Older children may not be aware enough of drowning hazards, know whether a baby or young child is drowning, or know how to revive them. A competent adult must always supervise children in and around water
- Always follow the manufacturer's instructions carefully.
- Do not attempt other tasks while bathing your child—for instance:
If the phone rings, ignore it—if the call is important the caller will leave a message or try again later.
Do not leave food cooking, as you will probably need to check on it even if it's slow cooking. Always turn off stoves, ovens, microwaves and other cooking or heat-making appliances before you put your child in the bath.
Only answer the front door if you take the child out of the bath and take it with you.
If you're expecting an urgent phone call or have to attend to something very important, take the child with you.
- Do not remove the warning label.
- Age suitability: 6-15 months approx.
- Make sure that the surface of the bath is thoroughly clean, smooth and undamaged and that there are no non-slip surfaces (i.e. with raised designs or satin finish).

- Don't keep baby bath aids when their warning labels have faded or peeled off. The next person using the bath aid may not realise the danger and may leave a child inside unsupervised and at risk of drowning.
- Check that everything needed for bath time is close at hand; towels, toiletries, clean nappies, pyjamas etc. before putting the child or bath seat into the bath. This is to avoid leaving the baby alone once it is in the seat.
- Place the bath seat on the bottom of the bath, ensuring that the baby cannot reach the taps or plug holes.
- Press the seat firmly onto the bottom of the bath to secure the suckers. Check that all four suckers are gripping the bottom of the bath by gently trying to lift the seat upwards. Do not use the bath seat in a sink.
- Fill the bath with warm water (recommended temperature 38°C or 100°F) until it reaches the level marked on the outside of the bath seat.
- Always check the water temperature before putting the baby in.
- After bathing, lift the baby out of the bath seat before removing it from the bath.
- Remove the seat by pulling the special tags between the sucker feet upwards whilst lifting the bath seat out of the bath.
- Rinse the bath seat well and dry it before putting it away. Do not use any solvents or abrasives to clean the bath seat. To prolong the life of the suckers we recommend that you do not store the bath seat standing upright on the suckers.
- Even though the baby feels secure in the bath seat it could tip over whilst the baby reaches for toys or leans over in the bath seat, so never leave the baby unattended. A baby can drown in less than 3cm of water and it can take only seconds for it to happen.
- Don't put your baby in to the bath when the water is still running, the water temperature can change very quickly or the water could get too deep.
- Keep electric appliances (hair dryers, curling irons etc.) away from the bath.
- Put cold water in the bath first, then hot. This will help reduce the risk of scolding your baby.
- Do not attempt to slide the bath seat to a different position in the bath with the baby in the seat.

IMPORTANT SAFETY NOTES

- Do not use this bath seat until the baby can sit up on its own (6 months approximately).
- Do not use this bath seat when the baby can stand up by its self (15 months approximately).
- Stop using the bath seat if the suckers lose their grip or get damaged.
- Do not use this bath seat on non-slip or damaged surfaces.
- The bath seat is not suitable for multi level baths.
- Before use check that the bath seat is firmly fixed to the bath by all its suckers. Try lifting the bath seat slightly to make sure that all four suckers grip onto the bottom of the bath.
- Make sure that the water level does not go over the level shown on the bath seat.
- Make sure that the water is not too hot (not over 39°C or 102°F).
